

To form the negative First Conditional, we use the structure:

If + subject + do/does not + base form of the verb, (subject +) will + base form of the verb.

“If she does not pay attention, she will not create a good code.”

Explanation: In this example, “If she does not pay attention” is the negative condition, and “she will not create a good code” is the negative result. If the condition (not paying attention) happens, the negative result (not create a good code) will also happen.

To form the interrogative First Conditional, we use the structure:

Will + subject + base form of the verb + if + subject + base form of the verb?

“Will they go to the meeting **if it rains?**”

Explanation: In this example, “Will they go to the meeting” is the interrogative result, and “if it rains” is the condition. The question is asking if the result (going to the meeting) will happen if the condition (rain) occurs.
