

3- On job interviews, we often need to talk about past projects and experiences. Read the conversation between an interviewer and a Dev and fill in the gaps with the appropriate form of the verbs in the present, past or past continuous tense.

Interviewer: Can you _____ (tell) me about the most interesting project you _____ (work) on in your previous role as a front-end developer?

Dev: Certainly! During my previous position, I _____ (be) involved in an exciting project that _____ (aim) to revamp the user interface of a popular e-commerce platform.

Interviewer: That _____ (sound) interesting! What _____ (be) you specifically _____ (work) on for that project?

Dev: I _____ (be) responsible for _____ (implement) the new design concepts provided by the UX team. It _____ (involve) translating the mockups into actual HTML, CSS, and JavaScript code.

Interviewer: How _____ (do) you approach the implementation process?

Dev: Well, we _____ (follow) an Agile development methodology, so I _____ (collaborate) closely with the design team, back-end developers, and product owners. We _____ (have) regular meetings to discuss progress and _____ (address) any challenges.

Interviewer: Can you _____ (share) some specific tasks or challenges you _____ (face) during that project?

Dev: One of the main challenges _____ (be) ensuring cross-browser compatibility and responsive design. We _____ (have) to optimize the code for different devices and browsers while _____ (maintain) consistent user experience. Additionally, _____ (implement) complex animations and interactive elements _____ (require) meticulous attention to detail.

Interviewer: _____ (do) you _____ (face) any obstacles or unexpected issues during the project?

Dev: Yes, there _____ (be) a few hurdles along the way. For instance, we _____ (encounter) performance issues with some of the animations and _____ (have) to optimize them for smoother rendering. Additionally, we _____ (have) to adapt to evolving requirements and _____ (incorporate) user feedback to enhance the overall usability of the platform.
